This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

THE BOOK OF
Ornamental Alphabets
Ancient & Modern.

BY R. DELAMOTTE

In imperial 4to, neatly half-bound in Morocco, price £3 10s.,

A PRACTICAL TREATISE

OF

CAST AND WROUGHT IRON BRIDGES AND GIRDERS,

AS APPLIED TO RAILWAY STRUCTURES AND TO BUILDINGS GENERALLY,

WITH NUMEROUS EXAMPLES,

DRAWN TO A LARGE SCALE, SELECTED FROM THE PUBLIC WORKS OF THE MOST EMINENT ENGINEERS.

By WILLIAM HUMBER,

ASSOC. INST. C.E., MEM. INST. MECH. ENG.

OPINIONS OF THE PRESS.

"Mr. Humber's admirable work on Iron Bridges."—*The Times.*

"Mr. Humber's treatise deserves to be mentioned with great favour. We know of no work so rich in practical illustrations of existing structures, and we heartily join the author in thanking those Engineers who have so liberally contributed their detailed plans for publication here. They have conferred a lasting obligation upon their professional brethren."—*Mechanics' Magazine.*

"The work is so excellently arranged, that it is worthy of a place in the library of every Engineer. The spirit and ability of the author in furnishing so thoroughly practical a work to the public cannot be too highly commended. The introduction consists of some very sound remarks on the strength of cast-iron, and its applicability to building purposes; and the work as a whole presents an extremely valuable and comprehensive compilation of great utility for study and reference to all engaged in engineering constructions."—*Mining Journal.*

"A more impor[redacted]gineering world has not appeared [redacted]reatly enhanced by its being confi[redacted]t and wrought-iron has been employed by the most eminent Engineers in the construction of the many varieties of bridges and viaducts which have been designed for them for the works which they have been engaged on. It must not be thought by those who are unacquainted with Mr. Humber's work, that he has only gone over trodden ground. In fact there is no reproduction of designs that have appeared before; so that this volume may be considered a new and distinct work from those in existence. The outlay and trouble in the production must have been immense, and we trust the Profession will not let the author go without a liberal profit for his deserving labours."—*Civil Engineer and Architect's Journal.*

"A good collection of carefully drawn examples, selected from amongst the works not previously published, of eminent Engineers, specially to illustrate the various methods in which iron has been employed in the erection of these structures. The plates are well described, and full details are given as to cost and weight, as well as calculations exemplifying the method of determining the strains on the various parts."—*Builder.*

E. & F. N. SPON, 16, BUCKLERSBURY.

Just published, in crown 8vo, cloth. illustrated by wood engravings, price 6s., post free,

RECORDS OF MINING AND METALLURGY,

OR,

FACTS AND MEMORANDA

FOR THE USE OF THE MINE AGENT AND SMELTER.

By J. A. PHILLIPS & J. DARLINGTON.

CONTENTS.—Mining and Metallurgy—Historical Notice—Hydraulic Machinery—Steam Machinery—Steam Boilers—Superheated Steam—Crushing and Dressing Machinery—Assaying—Recent Metallurgical Processes—Boring—Mining as an Investment—Mining Economics—Copper Ore Statistics, &c. &c. &c.

OPINIONS OF THE PRESS.

"A pre-eminently useful book, one certainly that ought to fulfil a more extended measure of utility than merely supplying a referential work for mining agents and smelters. When the mass of information that may be obtained from this work becomes known, upon the numerous subjects it treats of, there cannot be a doubt that it will be duly valued by every one who is interested in mining results."—*Civil Engineer and Architect's Journal.*

In 12mo, sewed, price 6d. (post-free 7d.),

TURNERS' AND FITTERS' POCKET BOOK,

For calculating the Change Wheels for Screws on a Turning Lathe, and for a Wheel-cutting Machine.

By J. L. NICCA.

In 8vo, cloth, with plates, reduced to 6s.,

A PRACTICAL TREATISE ON THE CONSTRUCTION OF OBLIQUE BRIDGES,

WITH SPIRAL AND EQUILIBRATED COURSES.

By FRANCIS BASHFORTH, M.A., Fellow of St. John's College, Cambridge.

In 8vo, cloth, with Mahogany Slide, reduced to 4s.,

A GENERAL TABLE FOR FACILITATING THE CALCULATION OF EARTHWORKS

FOR RAILWAYS, CANALS, &c., WITH A TABLE OF PROPORTIONATE PARTS.

By FRANCIS BASHFORTH, M.A.

On a large scale, reduced to 6d.,

A GENERAL SHEET TABLE for facilitating the Calculation of Earthworks for Railways, Canals, &c.

By FRANCIS BASHFORTH, M.A.

THE

BOOK OF ORNAMENTAL ALPHABETS

Ancient and Modern,

FROM THE EIGHTH TO THE NINETEENTH CENTURY:

WITH NUMERALS:

INCLUDING

GOTHIC; CHURCH TEXT, LARGE AND SMALL; GERMAN ARABESQUE; INITIALS FOR ILLUMINATION, MONOGRAMS AND CROSSES, &c.

AND WITH

An Analysis of the Roman and Old English Alphabets (Large and Small),

FOR THE USE OF

ARCHITECTURAL AND ENGINEERING DRAUGHTSMEN, MASONS, DECORATIVE PAINTERS, LITHOGRAPHERS, ENGRAVERS, CARVERS, &c &c

COLLECTED AND DESIGNED BY F. DELAMOTTE.

SECOND EDITION.

BODLEIAN LIBRARY OXFORD

LONDON: E. AND F. N. SPON, 16, BUCKLERSBURY, E.C.

1859.

Arch. A. 57

PRINTED BY
C. WHITING, BEAUFORT HOUSE STRAND.

PREFACE.

AS there are no works of Ancient Alphabets of any excellence published in a cheap form, I have endeavoured, after many years' study and research in my profession as a Draughtsman and Engraver, to offer this collection to the favourable notice of the public, trusting that its very moderate price and general usefulness will be a sufficient apology for the undertaking.

In addition to the Ancient Alphabets, several original designs, with an analysis of the Roman and Old English, Large and Small Characters, and Numerals are given, which, I trust, will be found to be of great importance to the student.

The demand for a Second Edition within so short a period of the publication of the First, has convinced me in the most agreeable manner that it has been a work required by the public. To render it still more worthy of their attention, I have here introduced some additions, likely to enhance the interest and increase the value of the pages, as an indication of the esteem in which I have held the encouragement, and the respect I have paid to the suggestions of the purchasers of this book, and the critics by whom it has been so liberally reviewed.

Just published in 8vo, price 9s.,

ILLUSTRATED WITH NUMEROUS ENGRAVINGS ON STEEL AND WOOD,

AN ELEMENTARY TREATISE ON ORTHOGRAPHIC PROJECTION;

Being a New Method of Teaching the Science of Mechanical and Engineering Drawing,

INTENDED FOR THE INSTRUCTION OF ENGINEERS, ARCHITECTS, BUILDERS, SMITHS, MASONS, AND BRICKLAYERS, AND FOR THE USE OF SCHOOLS.

BY WILLIAM BINNS, ASSOC. INST. C.E.,

Master of the Mechanical Drawing Class at the Department of Science and Art, and at the Government School of Mines: late Professor of Applied Mechanics at the College for Civil Engineers.

OPINIONS OF THE PRESS.

An Elementary Treatise on Orthographic Projection: being a New Method of teaching the Science of Mechanical and Engineering Drawing. By Wiliam Binns, Assoc. Inst. C.E.

"How many authors of a 'Guide to Perspective Drawing,' 'A Practical Draughtsman's Book of Industrial Designs,' 'An Engineer and Machinist's Drawing Book,' or 'Complete Hand-Book to Orthographic Projection,' profess to thoroughly elucidate and make plain to the meanest capacity the principles and practice of orthographic, or the visional projection of solid bodies, but how few fulfil this professed object thoroughly! We remember Mr. Binns, the author of the present 'Elementary Treatise on Orthographic Projection,' when most ably, and in a scientific sense successfully, practising his system of education by lectures and lessons at the Putney College of Civil Engineers; a part of his then daily practice in class teaching is embodied in the present work.

"Mr. Binns has treated his subject in a practical and masterly manner, avoiding theoretical disquisitions on the art, and giving direct and applicable examples, advancing progressively from the correct orthographic projection of the most simple to the more complex forms, thus clearing away the mist from the mind of the student, and leading him gradually to a correct and thorough appreciation of what he has undertaken, and to that which it is his desire to attain.

"We trust Mr. Binns will follow out the design which he has commenced and announced in the present work, by applying his system of treatment to the more advanced subjects for delineation by orthographic projection."—*The Artizan.*

"The subject of Orthographic Projection is, as Mr. Binns expresses it, 'the A B C of that description of drawing which is universally adopted as a means of representing all kinds of engineering structures, as well as articles in the process of manufacture.'

"The present work comprises the Author's course of instruction, formerly at the College of Civil Engineers at Putney, and now at the Government Department of Science and Art. . . . . It bears throughout evidences of that careful consideration of pupils' difficulties which results from experience in teaching. The examples are well chosen, clearly worked out, and the work generally shows that the writer has in a high degree that perceptive faculty which often serves instead of systematic study in giving insight into geometrical principles."—*Civil Engineer and Architect's Journal.*

"The author of this work being a practical man, became in 1846, Professor of Applied Mechanics at the late College for Civil Engineers at Putney, and there taught geometrical drawing as a part of his course. Latterly he has been master of the mechanical drawing class at the Department of Science and Art, and at the Government School of Mines. It is a noteworthy feature in Mr. Binns's book—and we suppose we may say system—that his great endeavour is to do without copying from the 'flat,' and to bring the student to the practical projection of buildings or machinery.

"Of the work, which is practical in character, we shall speak more fully on another occasion."—*The Building News.*

LONDON: E. & F. N. SPON, 16, BUCKLERSBURY.

In 8vo, price 9s. cloth,

THE STEAM ENGINE FOR PRACTICAL MEN;

CONTAINING A

THEORETICAL INVESTIGATION OF THE VARIOUS RULES GIVEN IN THE WORK, AND SEVERAL USEFUL TABLES.

JOINTLY WRITTEN BY

JAMES HANN, A.I.C.E, AND PLACIDO AND JUSTO GENER, CIVIL ENGINEERS.

OPINIONS OF THE PRESS.

"A very useful guide to the Civil Engineer."—*Civil Engineer and Architect's Journal.*

"The object of the authors seems to have been to afford to the practical man the means of investigating for himself the variety of formulæ from which general rules are deduced; and the formulæ are accompanied and elucidated by practical rules. The problems and examples seem to have been carefully worked; and we feel satisfied that even well-informed practical Engineers will derive benefit from the study of a treatise, which appears to be also peculiarly suited to the student and the inquirer."—*Mining Journal.*

"To the practical and scientific Engineer, and to the Assistant-Engineer, who aspires to pass his examination for Chief with credit to himself and the Service, we can cordially recommend the work."—*The Nautical Standard.*

"A considerable mass of useful matter is contained in the pages of this book. The association of the Messrs. Gener with Mr. Hann in this work was evidently with a view to supply all those practical details which cannot be looked for from the mere theoretic inquirer, but with which actual and constant experience alone can give acquaintance; and their labours in this department have been attended with considerable success. We may refer especially to a very full, and as far as we know, original investigation of the effects of lap and lead of the slide, and the pages upon chimneys."—*Mechanics' Magazine.*

Just published, in fcap. 8vo, cloth, price 2s.,

THE MODERN PRACTICE OF BOILER ENGINEERING,

CONTAINING

OBSERVATIONS ON THE CONSTRUCTION OF STEAM BOILERS, AND REMARKS UPON FURNACES USED FOR SMOKE PREVENTION;

WITH A CHAPTER ON EXPLOSIONS.

BY ROBERT ARMSTRONG, C.E., CONSULTING ENGINEER.

REVISED, WITH THE ADDITION OF NOTES AND AN INTRODUCTION,

BY JOHN BOURNE, ESQ.

OPINIONS OF THE PRESS.

"The subject of this little work is one of great importance, as directly connected with the preservation of life and property to a large amount. Mr. Armstrong gives his readers the results of thirty years professional devotion to the matter, and his performance, which reviews the different kinds of steam boilers for marine as well as other purposes, is at once practical and suggestive."—*Bristol Mercury*, Nov. 29.

"This book contains a great deal that the least scientific reader will find interesting."—*Newcastle Chronicle*, Nov. 21.

"This little work is worthy the perusal of all who desire information as to the best kind of boilers now in use, or who require to ascertain the defects still desirable to be remedied. The work also contains some interesting reports on and investigations into explosions, and the deterioration of boilers generally,—the whole being rendered more valuable by the notes of Mr. BOURNE."—*Mining Journal.*

"The collected experience of a practical Engineer, who for thirty years of his life has directed his attention to the construction of Steam Boilers and Furnaces, is a valuable addition to the stock of Engineering knowledge, and it will be generally more appreciated because it is condensed within so small a volume as the one before us."—*Civil Engineer and Architect's Journal.*
